Vorachet (AOT) is 38 years old consultant and software engineer with a specialty of Semantic Web, SE (Systems Engineering) / MBSE (Model Based Systems Engineering), and ML (Machine Learning) / NLP (Natural Language Processing). He has enjoyed working with people to accomplish requirements and solution discovery, technology implementation and deployment through the applications of his area of expertise.

He is committed to support other people by offering them educational and consultation services to get values from systems engineering and machine learning technologies.

As Thai systems engineer, I'm always excited to see Thai engineers working on their own technology. I believe in Thailand to build mature socioeconomic and socio-technical systems, SE are the crucial elements and know-hows pulling together all human and other resources in an effective way for successful progresses in all industries. Without the expertise of SE, the only way to maintain the manufacturing economy is via reverse engineering and imitating what had been developed by advanced countries. I want to persuade Thai engineering communities to let them know that there are more than manufacturing technologies in advanced economies. The "SysML Users in Thailand" community is a collaboration tool used to invite members to examine the new disciplines of SE - Vorachet Jaroensawas, June 1, 2017
